INTERACTIVE LEARNING PROJECT

Welcome to Logic Lab.

Explore how computers make decisions using logic gates, then convert values between binary, octal, decimal and hexadecimal.

Explore logic gates ↓ Try number conversion ↓

PART 01 · DIGITAL ELECTRONICS

Logic gate explorer

Logic gates take binary inputs (0 or 1) and produce a binary output.

0 = OFF · 1 = ON

TRY IT YOURSELF

Live gate simulator

Change the inputs and watch the output of every gate update instantly.

Input A: 0 Input B: 0

AND 0 · OR 0 · NOT A 1 · NAND 1 · NOR 1 · XOR 0 · XNOR 1

AND $Y = A \cdot B$

AND gate

Output is 1 only when both inputs are 1.

A	B	Y
0	0	0
0	1	0
1	0	0
1	1	1

OR $Y = A + B$

OR gate

Output is 1 when at least one input is 1.

A	B	Y
0	0	0
0	1	1
1	0	1
1	1	1

NOT $Y = \bar{A}$

NOT gate

It has one input and gives the opposite output.

A	Y
0	1
1	0

NAND $Y = \overline{(A \cdot B)}$

NAND gate

It is the opposite of AND: output is 0 only when both inputs are 1.

A	B	Y
0	0	1
0	1	1
1	0	1
1	1	0

NOR $Y = \overline{(A + B)}$

NOR gate

It is the opposite of OR: output is 1 only when both inputs are 0.

A	B	Y
0	0	1
0	1	0
1	0	0
1	1	0

XOR $Y = A \oplus B$

XOR gate

Output is 1 when the two inputs are different.

A	B	Y
0	0	0
0	1	1
1	0	1
1	1	0

XNOR $Y = \overline{(A \oplus B)}$

XNOR gate

It is the opposite of XOR: output is 1 when inputs are the same.

A	B	Y
0	0	1
0	1	0
1	0	0
1	1	1

Remember: NAND and NOR are called universal gates because combinations of either one can be used to build any basic logic function.

PART 02 · NUMBER SYSTEMS

Number system converter

Enter a number in one base to see its equivalent in the other three systems.

BASE 2 · 8 · 10 · 16

Enter your number: 45

Input number system: Decimal (base 10)

Binary	Octal	Decimal	Hexadecimal
Base 2 · digits 0–1	Base 8 · digits 0–7	Base 10 · digits 0–9	Base 16 · digits 0–9, A–F
101101	55	45	2D
Copy	Copy	Copy	Copy

Clear

Supports whole and fractional numbers. Long fractional results display up to 16 digits. An ellipsis (…) indicates additional digits.

Binary
Uses only 0 and 1. Computers represent data using binary states.

Octal
Base 8. Uses digits from 0 to 7.

Decimal
Base 10. The everyday number system, using 0 to 9.

Hexadecimal
Base 16. Uses 0 to 9 and A to F, where A means 10 and F means 15.

KEEP EXPLORING

Small building blocks. Big ideas.

Logic gates are the foundation of digital circuits, and number systems help represent information inside computers.

ABOUT THE PROJECT

Technology made easier to understand.

Welcome to AuthFlow! This website is an educational project created to demonstrate the fundamentals of web authentication and digital logic through interactive experiences. Our aim is to make learning technology practical, interesting and easier to understand.

Our Purpose

The main purpose of AuthFlow is to introduce visitors to the concepts behind modern websites and digital computing. Instead of only reading about these concepts, visitors can interact with the features and observe how they work. This project combines web development with basic computer science concepts in one place.

What Does This Website Offer?

AuthFlow brings together two educational components.

🔐

AuthFlow

An authentication demonstration that introduces how websites manage user accounts and access.

- Email and password authentication
- Google sign-in
- Password recovery
- Personalized dashboard
- User session management

💡

Logic Lab

An interactive learning space for understanding digital logic and number systems.

- Seven digital logic gates
- Interactive gate simulations
- Truth tables
- Binary conversions
- Octal, decimal and hexadecimal conversions

Acknowledgements

Our Teachers, Our Inspiration

This project would not have been possible without the guidance, encouragement and cooperation of our teachers.
Their valuable suggestions, support and motivation helped us understand the concepts, develop our ideas and bring this project into practice.
We sincerely express our gratitude to all the teachers who supported us throughout this learning journey.

Project Credits

Every project has people and ideas behind it. Here are the details of the people and institution associated with this project.

Project Created By	[Ayush Kumar Naik]
Project Guide	[Jhasketan Pradhan]
Additional Guidance	[Teacher's Name]
School	[Sukanti Academy]
Class / Section	[Class XI SEC-C]
Presented At	Science Exhibition 2026
Academic Session	[2026]

Technology Behind AuthFlow

This project uses a combination of web technologies and development platforms.

HTML5 · CSS3 · JavaScript · Supabase · GitHub · Netlify

© 2026 AuthFlow. Educational Project.
